Right, debug.log is what I need.

You're using v0.1.3 right? What operating system are you using?
I haven't tested Vista yet but I'm getting a copy tomorrow.
Several people have been running on XP since I released v0.1.3
without problems.

0x000bd598 isn't a valid address. If it printed another address
in the crash dialog, that would be useful.

Thanks,
Satoshi

I had another crash in the early hours of this morning: from Event Viewer:

Would it be useful to send an updated copy of debug.log?

I have restarted Bitcoin, and it is running normally.

Nicholas
