That's the transaction fee feature. If you generate a block containing a transaction that includes a transaction fee, you earn the transaction fee in addition to the 50.00. Someone must have included a 0.10 fee with one of their transactions. The setting to do that is under options. Including a fee is completely optional, more of a donation to nodes for helping out.

Bitcoin continues to run smoothly, but I noticed an unusual event:

731 blocks	11/05/2009 15:58	Generated	+50.10
------------	------------------	-----------	--------

All prior and subsequent generated packers have been of exactly 50.

Just in case this is of interest!

Regards,

Nicholas

Thanks for the explanation. I've set a transaction fee of 0.07, just to see how it works out. (I feel I can afford it, as my balance is now over 35,000!)
